CONCERT STAGE SPECIFICATIONS

This mobile stage system comes complete with stage platform, concert truss adjustable height roof, and steps. Adding up the costs of a stage platform, trussing, and rigging you will soon see that this package is a viable option. The complete system is transported as a semi-trailer. Due to ground support systems this stage can adapt to most uneven ground surfaces. While it is built to withstand outdoor conditions, it is also suitable for indoor use. This way a complete stage, trussing, and rigging system can be utilised on a self-standing platform without the need for rigging points in the venue roof.

Stage Dimensions

Floor Dimensions: 12m Width, 7.3m Depth, 1.5m Height (dependant on ground surface).

Floor surface: Sealed ply. Surface can be carpeted if required (suggested in wet conditions).

Floor Skirting: Black PVC.

Roof Dimensions: 12m Width, 9m Depth. Height from stage floor: 4m (differs when raked).

Roof Construction: Standard 2inch 600mm concert tri truss - Front, mid*, rear, sides.

Roof Surface Cover: Black PVC.

Roof Load Capacity: Gound surface permitting - 1 ton max.

*Mid truss is not centred in roof. It can be rigged to be closer to the rear or towards the front.
